Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

09/886,771

Applicant(s)

BRADLEY ET AL.

Examiner

Patricia C. Zicht

Art Unit

2164

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-31 is/are pending in the application.
- 4a) Of the above claim(s) ____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) ____ is/are allowed.
- 6) ☒ Claim(s) 1-31 is/are rejected.
- 7) ☐ Claim(s) ____ is/are objected to.
- 8) ☐ Claim(s) ____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☒ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 21 June 2001 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. ____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date 8/23/01.

- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. ____.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: ____.

SAM RIMELL
PRIMARY EXAMINE

DETAILED ACTION

Specification

1. The specification is objected to because the arrangement of the disclosed application does not conform with 37 CFR 1.77(b).

Section heading appear underlined and in lowercase format throughout the disclosed specification. Section headings should not be underlined, and should appear in UPPERCASE format. Appropriate corrections are required according to the guidelines provided below:

2. The following guidelines illustrate the preferred layout for the specification of a utility application. These guidelines are suggested for the applicant's use.

Arrangement of the Specification

As provided in 37 CFR 1.77(b), the specification of a utility application should include the following sections in order. Each of the lettered items should appear in upper case, without underlining or bold type, as a section heading. If no text follows the section heading, the phrase "Not Applicable" should follow the section heading:

- (a) TITLE OF THE INVENTION.
- (b) CROSS-REFERENCE TO RELATED APPLICATIONS.
- (c) STATEMENT REGARDING FEDERALLY SPONSORED RESEARCH OR DEVELOPMENT.
- (d) INCORPORATION-BY-REFERENCE OF MATERIAL SUBMITTED ON A COMPACT DISC (See 37 CFR 1.52(e)(5) and MPEP 608.05. Computer program listings (37 CFR 1.96(c)), "Sequence Listings" (37 CFR 1.821(c)), and tables having more than 50 pages of text are permitted to be submitted on compact discs.) or
REFERENCE TO A "MICROFICHE APPENDIX" (See MPEP § 608.05(a). "Microfiche Appendices" were accepted by the Office until March 1, 2001.)
- (e) BACKGROUND OF THE INVENTION.
 - (1) Field of the Invention.

Art Unit: 2164

(2) Description of Related Art including information disclosed under 37 CFR 1.97 and 1.98.

(f) BRIEF SUMMARY OF THE INVENTION.

(g) BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWING(S).

(h) DETAILED DESCRIPTION OF THE INVENTION.

(i) CLAIM OR CLAIMS (commencing on a separate sheet).

(j) ABSTRACT OF THE DISCLOSURE (commencing on a separate sheet).

(k) SEQUENCE LISTING (See MPEP § 2424 and 37 CFR 1.821-1.825. A "Sequence Listing" is required on paper if the application discloses a nucleotide or amino acid sequence as defined in 37 CFR 1.821(a) and if the required "Sequence Listing" is not submitted as an electronic document on compact disc).

3. The abstract of the disclosure is objected to because it contains more than 150 words.

Correction is required. See MPEP § 608.01(b).

Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

Art Unit: 2164

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-31 are rejected under 35 U.S.C. 102(b) as being anticipated by Fayyad et al. (PCT Pub No. WO 99/62007).

As to claim 1, Fayyad et al. teaches a method for clustering data in a database comprising:

- a) providing a database having a number of data records having both discrete and continuous attributes (see page 7, lines 4-6);
- b) grouping together data records from the database which have specified discrete attribute configurations (see page 8, lines 5 through page 9, lines 1-13; and see Table 1 and "Cluster Attribute/Value Probability Tables");
- c) clustering data records having the same or similar specified discrete attribute configuration based on the continuous attributes to produce an intermediate set of data clusters (see page 11, line 42 through page 12, line 32); and
- d) merging together clusters from the intermediate set of data clusters to produce a clustering model (see page 14, lines 26-28; and see figures 8A-8D).

As to claims 2, 9, and 23, Fayyad et al. teaches wherein the clustering model includes a table of probabilities for the discrete data attributes of the data records for

a cluster and wherein the cluster model for continuous data attributes comprises a mean and a covariance for each cluster lines (see claim 1b).

As to claims 3, 14, and 24, Fayyad et al. teaches wherein the process of merging of intermediate clusters is ended when a specified number of clusters has been formed (see page 8, lines 12-14, where “specified number of clusters” is read on “initial cluster number $K=3$ ”; and see claim 14, where “specified number of clusters” is read on “K clusters”).

As to claims 4 and 25, Fayyad et al. teaches wherein the step of merging of intermediate clusters is ended when a distance between intermediate clusters is greater than a specified minimum distance (see page 27, line 12 through page 28, line 26, where “distance between intermediate clusters” is read on “stopping criteria” and “specified minimum distance” is read on “the sum of these two numbers” and “the sum of these numbers”).

As to claims 5 and 26, Fayyad et al. teaches wherein the discrete attributes are Boolean and similarity between configurations is based on a distance between bit patterns of the discrete attributes (see page 33 where “Boolean” and “bit patterns” is read on “0/1 assignments”).

As to claims 6 and 20, Fayyad et al. teaches wherein one or more of the discrete attributes have more than two possible values and comprising the step of subdividing a discrete attribute having more than two possible values into multiple Boolean value attributes (see page 33 where “Boolean” and “two possible values” is read on “0/1 assignments”).

As to claims 7 and 27, Fayyad et al. teaches wherein the step of identifying configurations includes tabulating data records having the same discrete attribute bit pattern and combining the data records from similar configurations before clustering the data records so tabulated based on the continuous attributes (see page 33 where “bit pattern” is read on “0/1 assignments”).

As to claim 8, Fayyad et al. teaches a method for clustering data in a database comprising:

a) providing a database having a number of data records having both discrete and continuous attributes (see page 14, line 32 through page 15, line 2);

b) counting data records from the database which have the same discrete attribute configuration and identifying a first set of configurations wherein the number of data records of each configuration of the first set of configurations exceeds a threshold number of data records (see page 15, line 21 through page 16, line 15, where “counting data records” is read on “counting the number of data records” and “exceeds a threshold number of data records” is read on “stopping criteria”);

c) adding data records from the database not belonging to one of the first set of configurations with a configuration within the first set of configurations to produce a subset of records from the database belonging to configurations in the first set of configurations (see page 15, lines 12-18, where “subset of records” is read on “compressed data”); and

d) clustering the subset of records contained within at least some of the first set of configurations based on the continuous data attributes of records contained within that first set of configurations to produce a clustering model (see page 15, lines 19-27, where “continuous data attributes” is read on “ordered attributes”).

As to claim 10, Fayyad et al. teaches wherein an added record not contained within the first set of configurations is added to one of the first set of configurations based on a distance between a smaller configuration to which the added record belongs during counting of records in different configurations (see page 15, line 24-25, where “counting” is read on “M’ counting”).

As to claims 11 and 28, Fayyad et al. teaches wherein the clustering of records from a configuration based on continuous data attributes results in a variable number of clusters for each configuration based on the number of records in the configuration (see page 15, lines 19-32, where “continuous data attributes” is read on “ordered attributes”; and where “variable number of clusters” is read on “scalable clustering process”).

As to claim 12, Fayyad et al. teaches wherein the clustering of records from records falling within a configuration of the first set results in a number of intermediate clusters which are merged together to form the cluster model (see page 18, lines 23-31, where “records falling with a configuration” is read on “data points falling within a given cluster”).

As to claim 13, Fayyad et al. teaches wherein intermediate clusters are merged together based on a distance between clusters that is determined based on both continuous and discrete attributes of the intermediate clusters (see page 4, line 20 through page 5, line 4, where “clusters are merged” is read on “membership of a given record in a particular cluster”; and see page 19, lines 1-7, where “distance between clusters” is read on “sufficiently ‘close’ to an existing CS subcluster”).

As to claim 15, Fayyad et al. teaches wherein the merging of intermediate clusters is performed until a distance between two closest clusters is greater than a threshold distance (see page 19, line 25 through page 20, line 2).

As to claims 16 and 29, Fayyad et al. teaches wherein a list of records of each configuration in the first set of configurations is maintained as data records are accessed from the database (see page 8, lines 5 through page 9, lines 1-13; and see Table 1 and “Cluster Attribute/Value Probability Tables”).

As to claims 17 and 30, Fayyad et al. teaches where the clustering based on the continuous attributes of records within a configuration is performed using expectation maximization clustering of the continuous attributes (see page 4, line 20 through page 5, line 4).

As to claim 18, Fayyad et al. teaches a data processing system comprising:

- a) a storage medium for storing a database having a number of data records having both discrete and continuous attributes (see page 7, lines 4-9);
- b) a computer for evaluating data records from the database and building a clustering model that describes data in the database (see page 7, lines 1-5); and
- c) a database management system including a component for selectively retrieving data records from the database for evaluation by the computer (see page 7, lines 9-11, where "retrieving data records" is read on "brings data from the database");

For the remaining steps of this claim, the applicant is directed to remarks and discussions made in claim 1 above.

As to claim 19, Fayyad et al. teaches wherein the computer includes a rapid access storage for maintaining a list of data records from the database for data records having a specified discrete attribute configuration to facilitate clustering of the data records based on their continuous attributes (see page 5, lines 5-8).

As to claim 21, Fayyad et al. teaches wherein the rapid access storage of the computer includes a data structure for storing a clustering model (see figures 8A-8D).

As to claim 22, Fayyad et al. teaches a computer readable medium containing stored instructions for clustering data in a database comprising instructions for (see page 7, lines 1-11):

a) reading records from a database having a number of data records having both discrete and continuous attributes (see page 7, lines 4-11, where “reading records” is read on “brings data from the database”);

For the remaining steps of this claim, the applicant is directed to remarks and discussions made in claim 1 above.

As to claim 31, Fayyad et al. teaches where records are assigned to a single cluster during the expectation maximization clustering process (see page 4, lines 26-31; and see claim 24).

Conclusion

6. Any inquiries concerning this communication or earlier communications from the examiner should be directed to Patricia C. Zicht, whose telephone number is (571) 272-5866. The examiner can normally be reached on Mondays-Fridays from 07:30 am to 04:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Dov Popovici, can be reached at (571) 272-4083.
